## Education

---

**University of Chicago** - B.S. in Computer Science, B.A. in Economics

Expected June 2026

**GPA:** 3.71

**Relevant Coursework:** Data Structures and the Fundamentals of Computing, Advanced Programming Techniques in Java, Financial Accounting, Microeconomics

## Relevant Experience

---

### TRACT

*Back-End Software Engineering Intern*

December 2022 - August 2023

- Developed a Social Media Analysis system, which increased the efficiency of the company's social media due diligence process by over 90%
- System utilized official APIs from Twitter, Instagram, Facebook, LinkedIn and Youtube, as well as Machine Learning Models to detect the sentiment of posts
- Acted as a project manager for a team of 6, conducting weekly code reviews and communicating the CEO's vision
- Coordinated with teams company-wide to integrate social media system into the universal software platform and introduced the software to 50+ team members

### White Plains Hospital

*Data Analytics Intern*

June 2022 - August 2022

- Built a data analytics platform using Python for the discharge department of White Plains Hospital, allowing the hospital to easily input and analyze secure patient data on their local computers, saving the department an estimated 6.5 hours per week
- Supported the healthcare team by directly interfacing with patients to arrange physical therapy, cater for their needs, and aid with outpatient discharge

## Projects

---

### Chess-Analytica

[GitHub Repo](#) / [PyPi](#) / [Documentation](#)

- **Languages:** Python (including `python-chess`, `urllib3`)
- Coded and published a Python package that allows for easy data analytics of chess games, as it scrapes chess.com profiles (through the chess.com API) and includes methods to help analyze games and players. I published under the MIT license on PyPi and included thorough documentation on [readthedocs.io](https://readthedocs.io) to allow for easy use of developers. It has an estimated 4,000+ installs as of September 2023.

### US College Ranking Data

[GitHub Repo](#) / [Live Website](#)

- **Languages:** Python (including `Selenium`), Javascript, HTML5, CSS3
- Scraped 20+ data points on over 100 universities in the United States, ranging from their average SATs, to acceptance rates, to CS program rankings. I stored this in several formats (.xlsx, .csv, .json) to allow for maximum compatibility across projects built off of this data. I also created a website to allow for a user to give custom ranking weights to each category, which utilizes HTML, CSS and JS.
